

**Abstract****Apparatus and method for drying articles that have been treated**

5 An apparatus and a corresponding method for drying articles which have been treated (1) are proposed, the apparatus including transport means (3) for transporting the treated articles (1) along a transport path. Gas outlet devices (4, 5) disposed opposite one another are arranged above the transport path. A gaseous drying medium is supplied separately by fan means to the gas outlet  
10 apertures by supply lines (8, 9).

A pressure associated with each gas outlet device (4, 5) is detected and a gas flow associated with the gas outlet device (4, 5) is regulated by regulating means as a function of this pressure.
